ROTARY CAROUSAL PARKING SYSTEM

Model PCX rotary carousal parking system is suitable for crowded yard and small space, this vertical parking system is only 5 meters wide and 6 meters long. Each set of vehicle storage can be designed and manufactured to be: model 8 vehicles, 10 vehicles and 12 vehicles. Each garage is limited to the same height of the vehicle storage. Such as the height of sedan vehicles and the SUV vehicles is very different from the height of the device. According to the user requirements can be an additional rain cover and high-end configuration, intelligent control, simple operation, safe and reliable, affordable.

How does it work?

The vertical circulation of the mechanical movement is used to automatically rotate each set of parking spaces according to the master smart card to the setting position. The motor drives the transmission mechanism through the speed reducer, and every distance is provided with a vehicle storage bracket. When the motor is started, the carriage bracket is in a circular motion with the chain.

■ VERTICAL ROTARY PARKING SYSTEM
